

Project 02 :: Getting Started

You will complete all of the project compositions using the same square format: 400 x 400 pixels.

Create five Illustrator documents meeting the 400 x 400 pixel format.

Use a grid to divide the space of four of the Illustrator documents into square subdivisions. The grid squares may be any size, but the minimum number of divisions is 5 per side, that is, 25 total grid squares.

The fifth Illustrator document will contain no grid. Simply use a 400x400 pixels ground plane.

Create a root-level folder and label with your last name.

Create three more folders within your root folder and label those folder point, line, and plane.

Now, inside the point folder create three more folders. Label those folders 01_point, 02_point, and 03_point. Place a copy of the five Illustrator documents within each of the three folders.

Next, inside the line folder create three more folders. Label those folders 01_line, 02_line, and 03_line. Place a copy of the five Illustrator documents within each of the three folders.

Last, inside the plane folder create three more folders. Label those folders 01_plane, 02_plane, and 03_plane. Place a copy of the five Illustrator documents within each of the three folders.

See the "folder_example.pdf" for an example.
